

## Installing a WordPress Blog with Fantastico

- 1) Log into your cPanel Hosting account
- 2) Scroll to the bottom and find the blue smiley face. That's Fantastico!
- 3) Click on the face.
- 4) On the left side, you'll see a list of available programs.
- 5) Click on WordPress, under "Blogs."
- 6) Click "New Installation."
- 7) If you want to install the blog in the root directory (the main domain), leave the box that says "Install in directory" blank. If you're installing the blog in a subdirectory, such as <http://yourdomain.com/blog>, fill in the name of the directory. In this case it would be "blog."
- 8) Complete the other information and be sure to make note of your username and password.
- 9) Click "Install WordPress."
- 10) Go to <http://yourdomain.com/wp-login.php> and log into your new blog!
